

MADE IN THE MIDWEST

625,000 SQUARE FEET OF MANUFACTURING & ASSEMBLY SPACE

EASI REDI-Mix Trucks are built and assembled in New Ulm, MN and Prentice, WI.

We have manufacturing and engineering locations across the Midwest, where our teams have been providing manufacturing solutions for machinery and equipment projects—simple or complex, large or small—for more than 25 years. Rooted in hardworking rural communities, we understand the value of quality, reliability, and doing the job right.

We are one of the few firms in the country that offer true full service contract engineering and manufacturing.

Behind Every EASI REDI-Mix Truck

People who take pride in getting it right.

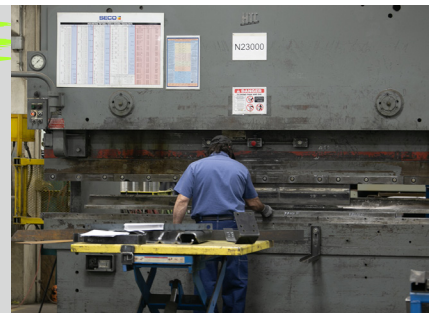

Engineering

Every EASI REDI-Mix Truck starts with thoughtful engineering. From concept to validation, our engineering staff model each truck to maximize payload and reduce weight while specifying the right controls for the right application. They work closely with other departments to ensure each design is practical, efficient, and built to meet the demands of real-world applications.

Once the designs are finalized, our fabricators transform raw materials into the needed components. Using advanced equipment they cut, bend, machine, and form steel to precise tolerances, ensuring every piece meets specifications. Their attention to detail is necessary to build a world-class EASI REDI-Mix Truck that delivers lasting durability and dependable performance.

Fabricators

Welders

Our AWS D 1.1 qualified welders bring each fabricated component together with skillful and precise welding to create strong, reliable assemblies that stand up to demanding jobsite conditions. The structural integrity, safety, and long-term performance for every EASI REDI-Mix Truck is supported one weld at a time.

Painters

After fabrication and welding are complete, our painters go on to turn the raw steel components into colorful pieces of art. Through careful surface preparation and high-quality coatings, they protect every component from corrosion while creating a clean, professional appearance to support the end user's brand.

Assemblers

With every component complete, our assemblers piece together the puzzle. They carefully install and integrate each part, ensuring it fits and functions exactly as intended. In the end, they churn out a fully operational EASI REDI-Mix Truck that's ready to perform from day one.

Project Management

Throughout production, our project management team keeps each build on track. They coordinate between departments, manage schedules, monitor quality, and ensure every milestone is met on time. By overseeing the entire manufacturing process, they help ensure every EASI REDI-Mix Truck meets standards before being handed off to end users.
